ILYAS AHMAD

Data Analyst | Data Science | Machine Learning
Peshawar, Pakistan • +92 341 8157001 • ilyassahmad54@gmail.com • linkedin• github

PROFESSIONAL SUMMARY

Data Science student with hands-on experience across AI, machine learning, computer vision, and data analytics internships and projects. Skilled in Python, deep learning, data visualization (Excel, Power BI, Tableau), and communicating findings to technical and non-technical stakeholders. Seeking an entry-level Data Analyst, Data Science, or AI/ML role.

TECHNICAL SKILLS

- Programming: Python (Pandas, NumPy, Matplotlib, Scikit-learn), SQL (MySQL), C++
- AI / Machine Learning: Deep Learning, Computer Vision, Transfer Learning, Object Detection (YOLO), Neural Networks (ResNet, U-Net, Vision Transformers), Multimodal AI, Supervised Learning, Regression, Classification
- Data Analysis & Visualization: Microsoft Excel (VLOOKUP, Pivot Tables, Advanced Formulas), Power BI, Tableau, Data Preprocessing & Validation
- Tools: Jupyter Notebook, Git, GitHub | Professional: Stakeholder Communication, Cross-Functional Collaboration, Analytical Thinking

EDUCATION

BS Data Science — University of Engineering and Technology, Peshawar **2024 – Present**
GPA: 3.7 / 4.0

CERTIFICATIONS

Data Science Learning Path (DataCamp) • MySQL for Data Analysis (Udemy) • Python for Data Science (Udemy) • Probability & Statistics (Khan Academy)

EXPERIENCE

AI Intern — National Center of Artificial Intelligence (NCAI), UET Peshawar **2025 – Present**

- Work on computer vision and deep learning models for image-based AI applications, including YOLO-based object detection — dataset preparation, annotation, training, and evaluation.
- Apply transfer learning to pretrained architectures (ResNet, U-Net, Vision Transformers) and contribute to a multimodal AI pipeline integrating multiple AI components using Python.

Machine Learning Intern — FlyRank AI **2024**

- Performed data analysis and preprocessing on business datasets using Python, and built reports/visualizations to communicate findings to stakeholders.
- Identified trends and data inconsistencies in complex datasets and collaborated with cross-functional teams to apply corrective measures.

Data Science Intern — DecodeLabs **2024**

- Conducted data analysis using Python and Excel on real-world datasets; designed Power BI/Excel visualizations and developed predictive models using regression techniques.
- Applied data cleaning, validation, and preprocessing pipelines; documented methodologies, results, and recommendations.

PROJECTS

- **Multimodal AI Pipeline:** Integrated multiple AI/computer vision components into a unified processing pipeline, covering model integration, image understanding, preprocessing, and inference workflows.
- **Helmet Detection Using YOLO:** Computer vision system for helmet detection using YOLO — dataset preparation, annotation, YAML configuration, model training, validation, and fine-tuning.
- **DiabetesCare — Diabetes Prediction System:** ML application for diabetes-risk prediction using Python and Logistic Regression, with data preprocessing, model evaluation, and an interactive Streamlit interface.
- **Customer Segmentation Model:** Applied exploratory data analysis, preprocessing, and clustering techniques to customer behavioral/demographic data to identify meaningful customer groups.
- **Student AI Usage & Academic Performance Dashboard:** Built an interactive Tableau dashboard analyzing relationships between student AI usage and academic performance.
- **Heart Disease Prediction System:** ML system for heart disease prediction using patient features, with data preprocessing, model training, evaluation, and an interactive prediction interface.
